Experience

State of California, Office of Data & Innovation

Senior Analytics Engineer, Governor Appointee

01/2024 – Present

- Develop and lead a [training program](#) equipping 40+ staff with data and analytics engineering skills focused on data modeling, git and version control, local development, dbt, and Snowflake through hands-on business problems, code reviews, and mentorship
- Enable self-service analytics by building, documenting, and testing data models using dbt that are optimized for cost and performance (partitioning, incremental models) and capture business logic and column-level definitions to support data governance – [Example 1](#) | [Example 2](#)
- Ingest data into Snowflake data warehouse by connecting to source data via Fivetran or writing custom Python scripts that leverage libraries like dltHub (data load tool) to read data from APIs

Data Strategist, Governor Appointee

06/2021 – 01/2024

- Matured ODI's data operations and analytics capabilities by establishing our data stack (Fivetran, dbt, Snowflake) through tool evaluation and vendor relationship development
- Grew the team from 2 to 5 by collaborating with my manager to shape all roles, develop screening questions and assessment criteria, conduct interviews, create documentation, and onboard staff

Founding Data Analyst

06/2020–06/2021

- Led a cross-functional product fix for ~25K users blocked from scheduling COVID-19 vaccines after identifying an anomaly in scheduling data
- Shaped the public-facing visualizations on covid19.ca.gov/equity by designing [mockups coded in Python](#) that went through multiple rounds of stakeholder review and feedback before ultimately getting approved by Surgeon General, Dr. Nadine Burke Harris
- Drove service improvements to California's unemployment insurance system by proactively analyzing the claimant experience which surfaced systemic bottlenecks and equity gaps and share my recommendations which were cited in [a report \(p. 46\)](#) solicited by Governor Newsom

Palantir Technologies

Deployment Strategist, Analytics Engineer

04/2019 – 09/2019

- Enabled aviation safety analyses by integrating geospatial aircraft data via the OpenSky API with open-source aircraft, runway, and airport datasets into an automated pipeline that produced actionable insights for the U.S. Department of Transportation
- Advanced client adoption and self-sufficiency on Palantir Foundry by leading hands-on demos and developing training materials, while building a custom XML parser to unlock Federal regulatory data from eCFR.gov for integration into analytical workflows

Technical skills

SQL, Python, YAML, Jinja, Bash, VS Code, Claude Code, Snowflake, BigQuery, GCS, AWS, Fivetran, dbt Core, dbt Cloud, dlt, Fivetran, GitHub, Bitbucket, Azure DevOps, Pandas, Jupyter, Jira, Excel

Education

Rutgers Business School, B.S. Marketing

General Assembly, Certificate Data Science
