

Brittany Allen

Sacramento, CA • thebrittallen@gmail.com • 415-948-3022 • [LinkedIn](#) • [Github](#)

I am a data enthusiast with 10 years of experience across digital marketing, engineering, product analytics, and public sector modernization. My work combines data literacy, product thinking, and organizational enablement with data analysis and engineering. My analysis work has transformed products and services used by millions of Californians, like covid19.ca.gov, myturn.ca.gov, and edd.ca.gov. I enjoy raising the collective knowledge of teams I am on and building cultures rooted in accountability, curiosity, and inclusivity. My approach to data work is both technical and human: I care as much about the people using systems as the systems themselves and I use data to improve how they function.

SKILLS

SQL, Python, Snowflake, Fivetran, dbt Core, Claude Code, Bash, Codex, Looker
YAML, Jinja, GitHub Actions, Pandas, dbt Cloud, Azure Data Factory, dltHub
VS Code, Azure DevOps, BigQuery, AWS, GCS, Jupyter, Excel, Jira, ChatGpt
Project management, Stakeholder management, Training, Storytelling, Presentations

EXPERIENCE

California Office of Data and Innovation

Senior Analytics Engineer, Governor–appointee | 2024 – Present

- Develop and lead a [training program](#) equipping 40+ staff with data and analytics engineering skills focused on data modeling, git and version control, and local development through hands-on business problems, code reviews, and mentorship
- Enable self-service analytics by building, documenting, and testing [data models](#) using dbt and documenting business logic and column-level definitions to support data governance
- Ingest data into Snowflake data warehouse by connecting to source data via Fivetran, Azure Data Factory, or writing custom Python scripts that leverage libraries like dlt (data load tool) to read data from APIs
- Integrate AI-assisted workflows that streamline engineering tasks, project coordination and communication, documentation, and rapid prototyping

Data Strategist, Governor–appointee | 2021 – 2023

- Facilitated the establishment and adoption of ODI's data stack (Fivetran, dbt, Snowflake) by developing tool evaluation frameworks, testing tools, and managing vendor relationships
- Supported team growth from 2 to 5 by shaping all roles, designing screening questions and assessment criteria, conducting interviews, creating documentation, and onboarding staff

Founding Data Analyst | 2020 – 2021

- Built the foundation for data-based product decisions by standardizing data collection, developing performance metrics and KPIs, creating and automating

- reporting, seeding analytics best practices through documentation and training, and partnering with stakeholders to understand their needs and empower decisions
- Led a product fix by identifying a bug in CA's vaccine scheduling system affecting ~25K users and worked cross-team with product and engineering to reproduce
- Informed the covid19 equity page by designing [data visualization coded in Python](#)
- Drove policy and service improvements by analyzing claimant data which surfaced gaps in CA's unemployment insurance system and shared data-driven recommendations cited in [a report \(p. 46\)](#) solicited by the Governor

General Assembly

Instructor / Data Science Scholar | 2018 – 2020

- Co-instructed 50+ professionals from Navy Federal Credit Union, Morgan Stanley, and the public across three courses focused on Python, SQL, and data science
- Awarded a full-scholarship into a data science intensive covering Python, SQL, regression, classification, hypothesis testing, applied statistical methods, etc.

Palantir Technologies

Deployment Strategist, Analytics Engineering | 2019

- Enabled operational aviation safety analyses by integrating geospatial aircraft data via the OpenSky API with aircraft, runway, and airport datasets into an automated pipeline that produced actionable insights for the U.S. Department of Transportation
- Built a custom XML parser that unlocked federal regulatory data from eCFR.gov for integration into analytical workflows
- Advanced client adoption and self-sufficiency on Palantir Foundry by leading in-person demos and developing training materials

Vox Media

Data Analyst | 2016 – 2017

- Unified and analyzed Google Analytics, search, and social media data to inform editorial strategy across five brands: the Verge, Polygon, Recode, etc.
- Drove a 34% increase in pageviews by building self-service [dashboards](#) via Google Analytics API that enabled stakeholders to do things like compare article performance on-demand

EXTRACURRICULAR

- Trained for and completed first half-marathon in March 2026
- Volunteer trash collecting, sorting, and data entry for Yosemite Climbing Association, Facelift, the largest public lands cleanup event in the US since 2023
- Crew leader and builder with Volunteers for Outdoors CA teaching trail maintenance and erosion control techniques and building and maintaining trails since 2022
- Freelance photographer capturing weddings, celebrities, and portraiture since 2013

EDUCATION

Rutgers Business School – Bachelor of Science, Marketing

General Assembly – Certificate, Data Science
